

VoxPath — Visual Overview

How the application fits together: system architecture, the shared MCP tool layer, and the main request flows for voice, chat, image→video, and news.

1 System Architecture

Browser → FastAPI → shared MCP tool registry → capability modules → external services.

2

Both the text and voice agents call the exact same tools through one FastMCP registry.

3

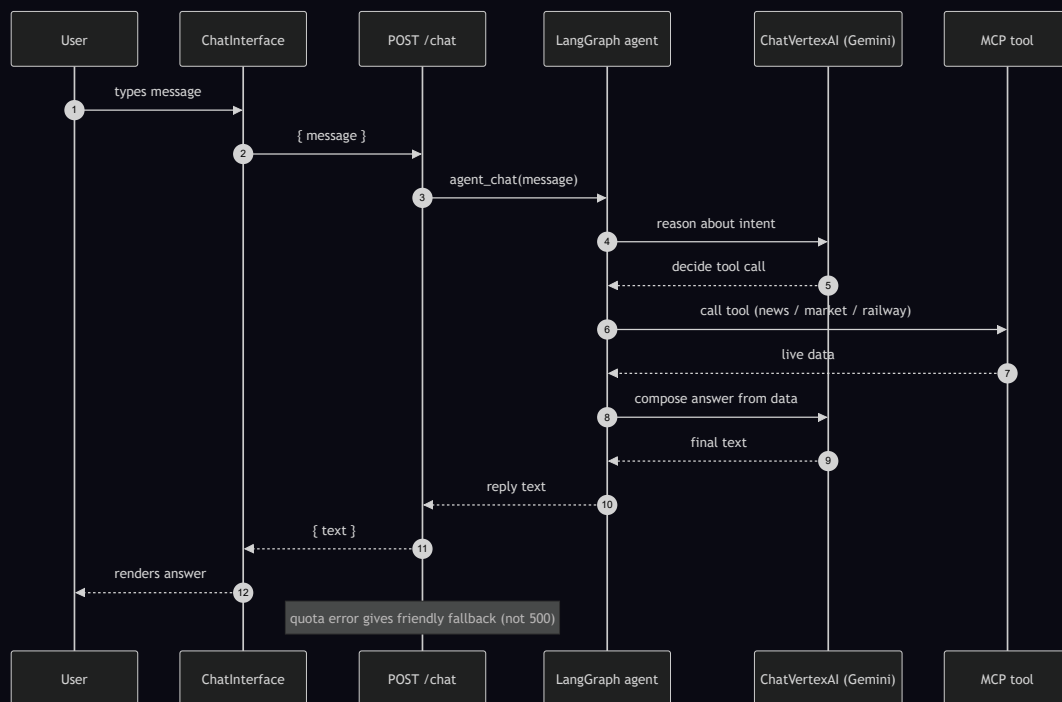

Continuous PCM streaming with server-side VAD, tool calls mid-turn, and half-duplex playback.

Syntax error in text
mermaid version 11.15.0

Text Chat Flow

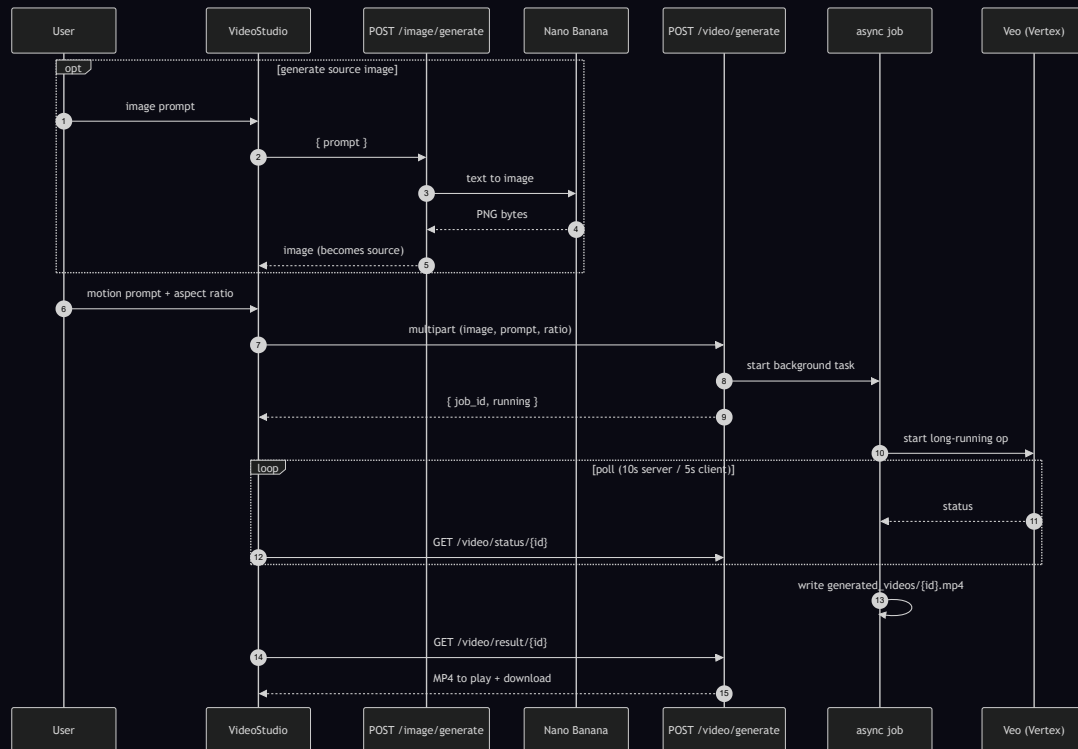

LangGraph ReAct agent decides a tool call, answers only from returned data.

5

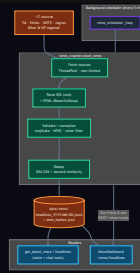

Image → Video Flow

Optional text→image (Nano Banana), then a long-running Veo job, polled to completion.

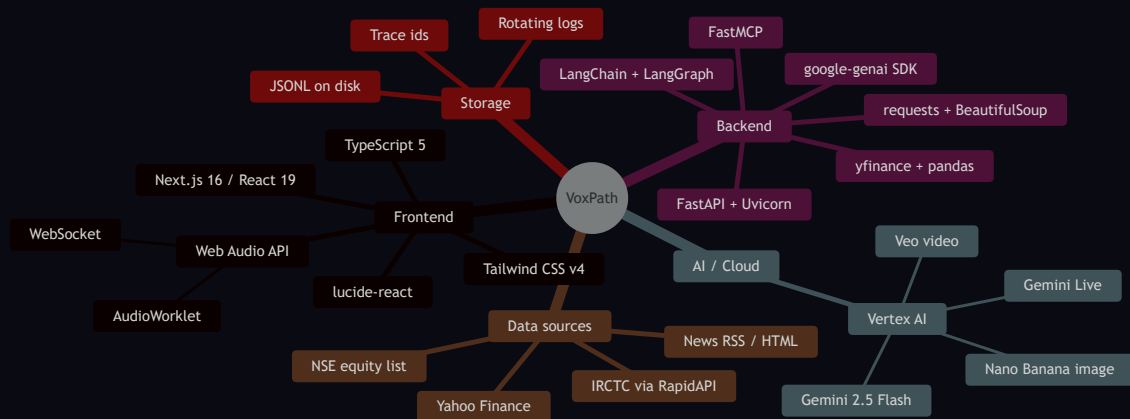

News Subsystem

Background + on-demand crawl, dedup, JSONL storage; tools and dashboard read stored headlines.

7 Technology Stack

The full toolset across frontend, backend, AI/cloud, data sources, and storage.
